

THE PLATFORM

Give every document more value. Simply.

Prepare, send and manage signing requests, timestamps and digital evidence in one place. A clear journey from the original document to a verifiable evidence file.

From original document to a verifiable outcome

For companies, professionals, organisations and creators

THE PLATFORM

Capabilities in one workspace

Choose the journey that fits the document, signers and level of assurance required.

Firmato separates preparing a request from the actual signature and the tools used to verify the result. Activities can be organised in a workspace with clear roles, recipients and statuses.

**Signing requests**

Configurable signing, identity, evidence and audit-trail workflows with external providers enabled only when required.

**Identity and checks**

Identity and KYC checks orchestrated in controlled workflows while keeping provider integrations separated from the application.

**Contracts and workflows**

Prepare, send, sign and govern contracts with states, roles, deadlines and end-to-end traceability.

**Evidence and verification**

Evidence Certificate, SHA-256 hashes, verification QR, manifest and audit trail to make outcomes readable and checkable.

The legal effect of a signature depends on its type, the service used and the applicable context.

THE PLATFORM

How a document is completed

Each request follows identifiable stages. The available evidence depends on the selected service and actions actually performed.

01

Upload a document

Choose a file and prepare your request.

02

Add recipients

Select who is involved and in which order.

03

Complete signing

Follow the signing method available for your selected service.

04

Keep the evidence

Access the document and technical records generated by the workflow.

Prepare the original, identify recipients, select the signing method available for the service and verify the outcome. Any technical evidence dossier remains separate from the signed document.

More than a signature. The context matters.

Where supported by the enabled workflow, Firmato brings files, events, hashes and attestations together in a readable dossier. Understand what happened and which checks are available.

THE PLATFORM

Signature levels and identity

The appropriate signature depends on the document, applicable law and identity checks.

**Simple electronic signature**

Approval and signing journeys with records consistent with the configured process.

**Advanced electronic signature**

Requires identity and process guarantees meeting the relevant legal conditions.

**Qualified electronic signature**

Requires a qualified trust service provider and the prescribed qualified components.

Firmato is a software platform, not a qualified trust service provider. Qualified services, where configured, are delivered by the provider actually involved.

Legal effect depends on the signature level, method and applicable context.

Commercial information; not legal advice.

Firmato is proprietary software of UESE ITALIA S.p.A. Its services are documented with attention to security, traceability and a clear distinction between the platform and the trust services involved.

THE PLATFORM

Why verifiable evidence matters

Technical records support reconstruction of a process without altering the original files.

**SHA-256 fingerprint**

Cryptographically identifies content and enables integrity checks.

**Audit trail**

Connects relevant events, times and states as recorded by the actual workflow.

**Timestamp**

Links specific data to a point in time; it does not alone prove authorship or truth.

**Evidence dossier and certificate**

Organises documents, metadata and references for review and verification.

Identifiers, digital fingerprints and event logs help reconstruct the document journey. The evidence available depends on the service used.

Where supported by the enabled workflow, Firmato brings files, events, hashes and attestations together in a readable dossier. Understand what happened and which checks are available.

THE PLATFORM

Company documents and information

Firmato also offers an information catalogue, displaying availability, prices and estimated fulfilment time before ordering.

**Company data**

Retrieve the company's identifying details and available basic registry information.

**Company registration extract**

Request a registry document outlining the company's recorded details and status.

**Filed financial statements**

Access available published financial statements for the relevant company.

**Business report**

Review information that can support preliminary commercial due diligence.

**Cadastral extract**

Request available property and land-registry details by the relevant references.

Some documents take longer to process. Reports are not creditworthiness guarantees.

Fewer steps. Better-organised information.

From requesting documents to reviewing their results, keep each step in one organised workspace.

THE PLATFORM

Security, governance and accountability

Digital trust relies on documented application controls, access management and evidence integrity.

**Access and identity**

Role-based access, two-factor authentication and least privilege.

**Integrity and auditability**

Fingerprints, metadata, audit logs and document verification procedures.

**Protection and privacy**

Server-side secrets, separated environments and data minimisation.

**Clear responsibilities**

Distinct roles for the Firmato platform, trust providers and the customer.

UESE ITALIA S.p.A. owns the Firmato platform. Actual services and assurances are described in contractual terms and active product descriptions.

Credibility starts with transparency.

Firmato is proprietary software of UESE ITALIA S.p.A. Its services are documented with attention to security, traceability and a clear distinction between the platform and the trust services involved.

Legal effect depends on the signature level, method and applicable context.

THE PLATFORM

Subscriptions and access options

An introductory trial and subscription paths for different workloads. Select by functionality, volume and current conditions.

15-day trial

Explore the platform and set up your workspace. Applicable trial terms define scope and limits.

Subscription plans

Compare features, usage thresholds, included documents, renewals and terms before purchase.

Organisation solutions

For teams needing governance, users and integrations, under the current commercial offer.

Refer to Firmato's live pricing page for amounts, limits, renewals and usage charges. No item is claimed to be automatically included here.

Plans, included allowances and individual service prices are shown in the pricing page and customer area.
